

Linde

REMAN

An actively managed remanufacturing program designed to provide reliable, original quality Linde Pumps and Motors at reduced cost through Linde Distributors

and the only difference between a Linde original and a REMAN

is the color!

In today's competitive marketplace, we are keenly aware of the importance of productivity and cost control as key factors in maintaining profitability. Linde understands that machine downtime is not an option. The remanufacturing program offered by Linde and our distributor organization is geared to address these issues through a precisely managed program that provides readily available inventory of remanufactured Linde product to replace an existing Linde pump or motor that has exceeded life expectancy limitations of the equipment manufacturer's warranty.

Quality, Reliability and Availability

The REMAN process is not a repair or minor adjustments to a Linde component. It is a complete remanufacturing process of a Linde pump or motor restoring it to original, customer specifications with the latest technical content using only, Linde certified, factory parts, Linde technology and the skills of our engineering and manufacturing departments that have made Linde a quality leader since it's 1970 incorporation.

A Lower Cost, Value-Added Alternative To New

A remanufacturing program with Linde can bring you substantial savings over buying new units. And, when you consider that you're getting the quality, technical content and reliability that is built in to every new Linde Pump or Motor, Reman value is even greater.

To maximize quality and product performance, all parts removed from Reman units must meet

Product that has met core criteria for remanufacturing is received at a section of our Canfield, Ohio facility devoted to the REMAN process where it is torn down and parts are inspected to factory usability specifications.

Each REMAN unit is assembled using the same diligent quality control procedures that have given the original Linde product its worldwide reputation for excellence and dependability.

strict, usability specifications. Seals and shaft seals, bearings, slide bearings, O-rings and locating pins and other parts (depending on the needs of a particular unit) are always replaced.

Performance. Quality. Reliability. When you compare a new Linde unit to a Reman unit...

THE ONLY DIFFERENCE IS THE COLOR!

REMAN

A Contract, Quoted Price

And, there are no pricing surprises. You are provided with a fixed price for the remanufacturing of your Linde product. With the simple core criteria being met, a contract, provided by your distributor, is your guarantee of no up-charges after the fact.

REMAN *Warranty*

Every Linde remanufactured unit is subjected to rigorous quality inspection and full-function testing. Each is painted our standard red primer, labeled and packaged to customer specifications before it leaves our plant. Each unit is warranted against material and workmanship for a full six months.

All units must pass a rigorous functional test... a final guarantee that our customer receives a good-as-new product... in prime condition... set to required specifications.

REMAN

Inventory and Delivery

With a forecast and ample amount of cores to support the forecast, Linde will build, carry inventory and guarantee same-day shipment of Reman units

REMAN

Qualifications

Does your pump or motor qualify for remanufacturing? The following is the simple core criteria that must be met:

What the Owner / Operator Wants...
Reman delivers

- *Now... Downtime is not an option*
- *A reliable, quality replacement*
- *Warranty Protection*
- *A fair price*

The pump or motor must be an original Linde unit

- Housing and head/center section must be in tact and usable
- All original parts must be attached – Solenoids, PTO's, Controls Etc.
- Units must be supplied assembled
